

Kangaroo Island logania

Scientific name: ***Logania insularis***

National status (*EPBC Act 1999*): **Vulnerable**

South Australian status: (*NPW Act 1972*): **Vulnerable**

Description:

Small erect shrub to 30 cm high, with minutely hairy stems. Bright green to red-tinged elliptical leaves to 8 mm long and 3 mm wide. Separate male and female plants. Cream to pale-yellow flowers in clusters. Flowering between September and November.

Distribution:

Endemic to the north-western tip of Kangaroo Island. Grows along the coast in open mallee or low shrubland on brown sandy soil overlying limestone.
